Subject: TEP proposal to raise solar panel fee

As you examine the validity of this request, please look at the return on investment to shareholders which I think is currently 10%. This indicates a company that is already highly profitable. If TEP says that the poor who can't afford solar will have their rates increased, please point out that 85% of installations are now leased which allows even the lowest income homes to drastically cut electric costs while sharing the savings with the solar company in lieu of paying for the panels.

We are currently in a paradigm shift similar to that of horse and carriage to automobile. If TEP wants to maintain their monopoly they should get on board.

Rooftop Solar Rate Increases Proposal: My husband and I have spent years doing research on climate change, watershed management and endangered species. We understand the facts about these issues and know it is absolutely necessary to reduce carbon emissions as soon as possible. So, to raise rates at all by TEP on rooftop solar and/or to force others to experience rate increases because TEP isn't meeting its bottom line is a fine example of lack of responsibility and imagination at this time. Market forces must be allowed to permit solar to make many more gains on replacing fossil fuels, and even water. (Case in point: Lake Powell/Lake Mead) In addition to market forces, at some point it is absolutely imperative that the government step in, in concert with the market forces. A carbon tax is needed to supplement utilities in meeting their bottom lines. We must stimulate more solar use, not less. Furthermore, with regard to lack of imagination, at some point soon battery use is going to permit homes and business to go off the grid. At that point TEP and other utilities will lose the ability to charge customers at all. They MUST plan for this, not by punishing their customers, but by establishing best practices that incorporate such changes. Rate increases will be a large and punitive step backward, when people are trying to do the right thing. Thank you, Nancy C Jacques and David L Wegner
